CTBTO Series on Preventing and Monitoring Nuclear Tests

Tipo:	Seminar
Ubicación:	New York City , United States of America
Fecha:	8 Jun 2018 to 11 Jun 2018 (Por confirmar)
Duración:	4 Days
Área del programa:	Corporate Social Responsibility, , Peace Security and Diplomacy, , Multilateral Diplomacy, , International Law
Sitio web:	http://unitar.org/
Precio:	0,00 US$
Correo Electrónico del Centro de Coordinación del Evento:	pelayo.ALVAREZ@unitar.org
Número del Centro de Coordinación del evento:	2129639196
Colaboración:	Comprehensive Nuclear-Test-Ban Treaty Organization

ANTECEDENTES

The Preparatory Commission for the CTBT Organization (CTBTO) utilizes a unique and comprehensive verification regime consisting of an International Monitoring System (IMS) (applying seismic, hydroacoustic, infrasound, radionuclide

technologies), with stations worldwide, to ensure that no nuclear explosion goes undetected. As a result, the CTBT makes it difficult for countries to either develop nuclear bombs for the first time, or to manufacture more powerful bombs. It also prevents the huge damage caused by radioactivity from nuclear explosions to humans, animals, and plants. On-site inspections can also be dispatched to the area of a suspected nuclear explosion, as indicated by the IMS.

The Preparatory Commission is now working to persuade the remaining 44 specific nuclear technology holder countries to both sign and ratify, as the CTBT has yet to come into force.

OBJETIVOS DEL EVENTO

- Give a general overview of the ongoing mission of CTBT and would further educate members of the UN community on the future of the treaty and the services that CTBT currently offers;
- Provide a hands-on approach that will expose participants to the verification and training procedures used in order to maintain an effective International Monitoring System.
