Unitar Online Catalogue

13th International Training Course on GIS for Disaster Risk Management (Module 2: Post-Disaster Impact and Damage Analysis)

Type:	Course
Emplacement:	Bangkok, Thailand
Date:	11 oct 2017 to 13 oct 2017
Durée:	3 Days
Zone du programme:	Satellite Imagery and Analysis
Site internet:	http://www.adpc.net/igo/contents/Training/training-schedule-event.asp?pid=1157
Prix:	0.00 $US
Personne de référence de l'évenement:	unosat@unitar.org
Numéro de téléphone de la personne de référence pour cet evènement:	0041 22 767 4020
Partenariat:	Asian Disaster Preparedness Center

ARRIÈRE PLAN

When disasters strike, the first thing the international early response community needs is i
coding, one can tell

immediately where the event took place and the apparent impact ofthe disaster. This is key information for an efficient planning and coordination of emergency response operations. The value of Geographic information systems (GIS) in emergency response arises directly from the benefits of obtaining, integrating, organizing, inquiring and analyzing geographic information and databases. This course introduces the application of GIS in emergency response mapping and damage assessment in disaster situations from the perspective of United Nations.

OBJECTIFS DE L'ÉVÉNEMENT

The aim of the course is to provide training participants with concepts and GIS methodologies to perform satellite based rapid response mapping and damage assessment including the understanding of the benefits and limitations of using geo-spatial information technology in the immediate aftermath of a disaster.

OBJECTIFS D'APPRENTISSAGE

At the end of the course participants should be able to:

- Describe and utilize spatial data, GIS and remote sensing in disaster risk assessment and management.
- Utilize existing sources of historical disaster information and elements at risk data.
- Apply GIS/remote sensing in hazard, vulnerability and risk assessment.
- Employ risk information in emergency preparedness planning.
- Visualize hazard and risk information.
- Apply GIS/remote sensing to post-disaster damage assessment.

CONTENU ET STRUCTURE

This course is extended over 10 workdays structured around the following modules:

Module 1: Core/Basic Information (about disaster risk management, GIS and spatial information)

Module 2: Post-Disaster Impact and Damage Analysis (UNOSAT Module)

At the end of the UNOSAT module participants will be able to:

- Explain the role of Geo-information in the response phase of a disaster.
- Gain awareness of GIS methodologies related to the rapid mapping processing chain to support emergency response.
- Identify, access, search, collect, organize and analyze geospatial data for emergency response mapping.
- Apply basic GIS methodologies to perform impact analysis and preliminary damage assessment in the immediate aftermath of a disaster

Module 3: Pre-Disaster Risk Assessment

Module 4: Risk Information for Risk Reduction Planning

Module 5: Mini-Projects

The course is divided into 5 modules where UNOSAT shall be responsible for module 2 only. UNOSAT's module is structured into 4 sessions of 1.5 hours each with an estimated workload of approximately 16 hours spread over 3 days. It is considered that the length of the course well reflects its scope and is adequate to enable participants to achieve the learning objectives.

MÉTHODOLOGIE

Full time face-to-face course with lectures and GIS lab exercises using real case disaster scenarios from past events (80% Lab Exercise, 20% lectures and discussions).

The whole course is divided into 10 module where the sessions by UNOSAT make up 3 out of the 10 Modules. Each module is structured into 4 sessions of 1.5 hour each. The average workload of the entire course is likely to be around 20-30 hours.

The whole course is designed in a way to have a balanced approach between theoretical and practical methodologies, which will enable the students to gain maximum knowledge on the subject. It will be taught in lecture/discussion formats illustrated with Power Point presentations, live demos, videos, maps, diagrams, field visits, interactive sessions and content on web sites.

AUDIENCE VISÉE

The course is open to all participants who are working or will be working in the organizations where spatial information is used or considered to be used for the purpose of disaster risk management, disaster management, or disaster risk reduction. It is recommended that participants taking the course have a working knowledge of English including a basic knowledge on GIS and Remote Sensing technology.

The course welcome participants from all geographic areas. ADPC accepts nomination on a first come, first served basis provided the applicant meets the course requirement.

Participants are recommended to attend a 4 hours long course "Getting Started with GIS" Offered by ESRI. Can be accessed through the following link -

http://training.esri.com/gateway/index.cfm?fa=catalog.webCourseDetail&courseid=2500

INFORMATIONS SUPPLÉMENTAIRES

Language:

English

Institution:

This course is co-organized and facilitated by the Asian Disaster Preparedness Center (ADPC), the Asian Institute of Technology (AIT), the Faculty of Geo-Information Science and Earth Observation of the University of Twente, the Netherlands (ITC) and UNITAR/UNOSAT.

Software Required:

GIS lab exercises will be based on ESRI ArcGIS 10.4 with extensions (spatial analyst), Google Earth, Access to internet.

Enquiries:

For further information, please send your enquiries to tsua [at] dpc.net (tsua[at]dpc[dot]net)
