BACKGROUND

Depression is one of the main risk factors for the cognitive impairment There are epidemiological, clinical, physiological, physiopathogenic, diagnostic, neurochemical, biomarker and therapeutic tests that prove the interrelated interrelation between both entities. The virtual course will analyze all these aspects.

EVENT OBJECTIVES

The objective of this training is that the participants can study the cognitive deterioration in order to diagnose this problem; differentiate the stages and types of deterioration; and be able to go to different therapies to treat them.

LEARNING OBJECTIVES

At the end of the course, participants will be able to:

- Perform early and accurate diagnosis of cognitive impairment.
- Power to make the differential diagnosis with normal cognitive decline.
- Make early and accurate diagnosis of depression.
- Know the elements of differential diagnosis between normal decline, cognitive impairment, dementia and depression.
- Know the pharmacological and non-pharmacological therapeutic management of these entities.
