Climate information and services (CIS) are defined as information and services that are used to inform decision-making on climate change adaptation and mitigation. CIS can be provided by governments, private sector, academia, and civil society. CIS can be provided in various forms, including reports, maps, databases, and decision support systems. CIS can be used to inform a wide range of decisions, including land use planning, infrastructure development, and disaster risk reduction. CIS can be used to support a wide range of stakeholders, including governments, businesses, and communities. CIS can be used to support a wide range of goals, including sustainable development, climate change adaptation, and disaster risk reduction.

UNDP is a leading provider of CIS. UNDP provides CIS to governments, businesses, and communities. UNDP provides CIS in a variety of forms, including reports, maps, databases, and decision support systems. UNDP provides CIS to support a wide range of stakeholders, including governments, businesses, and communities. UNDP provides CIS to support a wide range of goals, including sustainable development, climate change adaptation, and disaster risk reduction. (Kit Nicholson)

Objectives

After completing this e-tutorial, participants will be able to:

- Define climate information and services.
- Identify the uses of climate information and services in development planning and policy.
- Discuss the role of legislation in strengthening climate information and services.
- Provide examples of instruments available to governments for mainstreaming climate information and services.

Introduction

Climate change is a global challenge that requires a coordinated response. Climate information and services (CIS) are essential for understanding the risks of climate change and for developing effective adaptation and mitigation strategies. CIS can be used to inform decision-making on a wide range of issues, including land use planning, infrastructure development, and disaster risk reduction. CIS can be used to support a wide range of stakeholders, including governments, businesses, and communities. CIS can be used to support a wide range of goals, including sustainable development, climate change adaptation, and disaster risk reduction.
