Urban Planning is key to foster development. Seeking solutions to urban planning issues in theories and practice of design, key concepts such as 'sustainable design', 'eco (logical) approaches', 'environmental design', 'green design', 'eco-friendly building', 'smart space', 'zero carbon emission' 'energy efficiency in conservation ', ' high performance space ', ' climate control ' have emerged. The concept of sustainability, which has become more important currently, will be discussed with its environmental, socio-cultural, economic and legal, universal and local and technological dimensions.

The event aims to raise awareness for sustainable design within the scope of professional and ethical responsibility.

The event covers topics as follows:

- Ecological Sustainability in Interior Architecture
- Technological Sustainability in Interior Architecture
- Economic Sustainability in Interior Architecture
- Socio-Cultural Sustainability in Interior Architecture
- Sustainable Approaches in Residential Interiors
- Sustainable Design Approaches in Workplaces
- Sustainable Design Approaches for Tourism, Accommodation and Commercial Interiors and other functions
- Sustainability Trends and Market Research in Interior Architecture
- Future Insights for Sustainable Interiors
- Sustainable Interior Design in Media
